Submitted on December 1st, 2025

Including state machines/tasks, using meaningful names for flags/variables, etc. that you will use/have used in your implementation. The aim is for this to clearly capture your implementation, so it should be easy for a a reviewer to match your implementation and design.

LED2 Operation Pseudo FSM

NOTE: led2_variable_duty is an ADC based duty signal

Countdown Task Pseudo FSM

Display Task Pseudo FSM

Flow diagram Notes:

The states in main task were shortened to:

main(wait) = STATE_WAIT

main(input) = STATE_INPUT

main(count) = STATE_COUNT

main(end) = STATE_END
